

DIR-2150

**AC2100 Wave 2 MU-MIMO Wi-Fi Gigabit Router
with 3G/LTE Support and 2 USB Ports**

BEFORE YOU BEGIN

Delivery Package

- Router DIR-2150
- Power adapter DC 12V/2A
- Ethernet cable
- “*Quick Installation Guide*” (brochure).

If any of the items are missing, please contact your reseller.

The “*User Manual*” and “*Quick Installation Guide*” documents are available on D-Link website (see www.dlink.ru).

Using a power supply with a different voltage rating than the one included will cause damage and void the warranty for this product.

Default Settings

Domain name of device		<code>dlinkrouter.local.</code>
IP address of device		<code>192.168.0.1</code>
Username (login)		<code>admin</code>
Password		<code>admin</code>
Name of wireless network (SSID)	2.4GHz	<code>DIR-2150</code>
	5GHz	<code>DIR-2150-5G</code>
Network key (PSK password)		see WPS PIN on the barcode label on the bottom panel of the device

! Clients connected to the router with default settings do not have access to the Internet. To get started, please set your own password for access to the web-based interface and change the WLAN name (SSID); then, if needed, configure other settings recommended by your ISP.

System Requirements and Equipment

- An Android or iPhone mobile device (smartphone or tablet) or a computer with any operating system that supports a web browser.
- A PC web browser to access the web-based interface:
 - Apple Safari 8 and later
 - Google Chrome 48 and later
 - Microsoft Internet Explorer 10 and later
 - Microsoft Edge 20.10240 and later
 - Mozilla Firefox 44 and later
 - Opera 35 and later.
- A NIC (Ethernet or Wi-Fi adapter) to connect to the router.
- An 802.11a, b, g, n, or ac Wi-Fi adapter to create a wireless network.
- A USB modem (when it is necessary to connect to the Internet via mobile operators' networks).¹

Your USB modem should be equipped with an active SIM card of your operator.

 Some operators require subscribers to activate their USB modems prior to using them. Please, refer to connection guidelines provided by your operator when concluding the agreement or placed on its website.

For some models of USB modems, it is required to disable the PIN code check on the SIM card prior to connecting the USB modem to the router.

¹ Contact your operator to get information on the service coverage and fees.

CONNECTING TO PC

PC with Ethernet Adapter

1. Connect an Ethernet cable between any of LAN ports located on the back panel of the router and the Ethernet port of your PC.
2. ***To connect via USB modem:*** Connect your USB modem to one of two USB ports².

! In some cases you will need to reboot the router after connection of the USB modem.

3. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
4. Turn on the router by pressing the **POWER** button on its back panel.

Then make sure that your PC is configured to obtain an IP address automatically (as DHCP client).

² It is recommended to use a USB extension cable to connect a USB modem to the router.

Obtaining IP Address Automatically (OS Windows 7)

1. Click the **Start** button and proceed to the **Control Panel** window.
2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)
3. In the menu located on the left part of the window, select the **Change adapter settings** line.
4. In the opened window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

5. In the **Local Area Connection Properties** window, on the **Networking** tab, select the **Internet Protocol Version 4 (TCP/IPv4)** line. Click the **Properties** button.

6. Make sure that the **Obtain an IP address automatically** and **Obtain DNS server address automatically** choices of the radio buttons are selected. Click the **OK** button.

7. Click the **OK** button in the connection properties window.

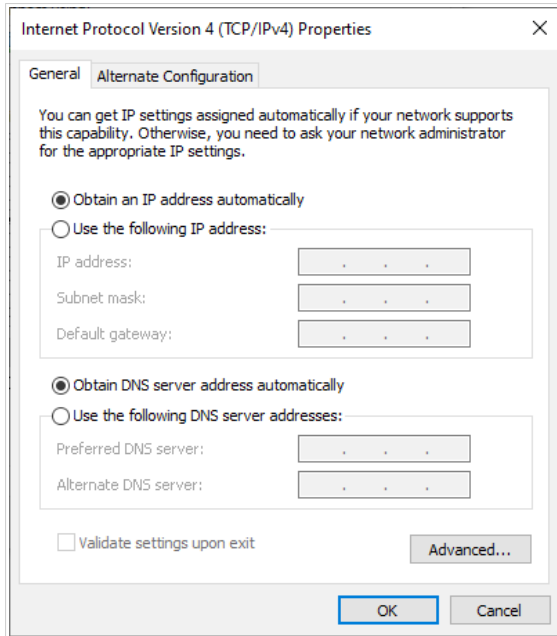

Obtaining IP Address Automatically (OS Windows 10)

1. Click the **Start** button and proceed to the **Settings** window.
2. Select the **Network & Internet** section.
3. In the **Change your network settings** section, select the **Change adapter options** line.
4. In the opened window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

5. In the **Local Area Connection Properties** window, on the **Networking** tab, select the **Internet Protocol Version 4 (TCP/IPv4)** line. Click the **Properties** button.

6. Make sure that the **Obtain an IP address automatically** and **Obtain DNS server address automatically** choices of the radio buttons are selected. Click the **OK** button.

7. Click the **Close** button in the connection properties window.

PC with Wi-Fi Adapter

1. **To connect via USB modem:** Connect your USB modem to one of two USB ports³.

! In some cases you will need to reboot the router after connection of the USB modem.

2. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
3. Turn on the router by pressing the **POWER** button on its back panel.
4. Make sure that the Wi-Fi adapter of your PC is on. As a rule, modern notebooks with built-in wireless NICs are equipped with a button or switch that turns on/off the wireless adapter (refer to your PC documents). If your PC is equipped with a pluggable wireless NIC, install the software provided with your Wi-Fi adapter.

Then make sure that your Wi-Fi adapter is configured to obtain an IP address automatically (as DHCP client).

³ It is recommended to use a USB extension cable to connect a USB modem to the router.

Obtaining IP Address Automatically and Connecting to Wireless Network (OS Windows 7)

1. Click the **Start** button and proceed to the **Control Panel** window.
2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)
3. In the menu located on the left part of the window, select the **Change adapter settings** line.
4. In the opened window, right-click the relevant **Wireless Network Connection** icon. Make sure that your Wi-Fi adapter is on, then select the **Properties** line in the menu displayed.
5. In the **Wireless Network Connection Properties** window, on the **Networking** tab, select the **Internet Protocol Version 4 (TCP/IPv4)** line. Click the **Properties** button.

- Make sure that the **Obtain an IP address automatically** and **Obtain DNS server address automatically** choices of the radio buttons are selected. Click the **OK** button.

- Click the **OK** button in the connection properties window.
- To open the list of available wireless networks, select the icon of the wireless network connection and click the **Connect To** button or left-click the network icon in the notification area located on the right side of the taskbar.

- In the opened window, in the list of available wireless networks, select the wireless network **DIR-2150** (for operating in the 2.4GHz band) or **DIR-2150-5G** (for operating in the 5GHz band) and click the **Connect** button.

- In the opened window, enter the network key (see WPS PIN on the barcode label on the bottom panel of the device) in the **Security key** field and click the **OK** button.
- Wait for about 20-30 seconds. After the connection is established, the network icon will be displayed as the signal level scale.

! If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the router you will need to reconfigure the wireless connection using the newly specified settings.

Obtaining IP Address Automatically and Connecting to Wireless Network (OS Windows 10)

1. Click the **Start** button and proceed to the **Settings** window.
2. Select the **Network & Internet** section.
3. In the **Change your network settings** section, select the **Change adapter options** line.
4. In the opened window, right-click the relevant **Wireless Network Connection** icon. Make sure that your Wi-Fi adapter is on, then select the **Properties** line in the menu displayed.
5. In the **Wireless Network Connection Properties** window, on the **Networking** tab, select the **Internet Protocol Version 4 (TCP/IPv4)** line. Click the **Properties** button.
6. Make sure that the **Obtain an IP address automatically** and **Obtain DNS server address automatically** choices of the radio buttons are selected. Click the **OK** button.

7. Click the **Close** button in the connection properties window.

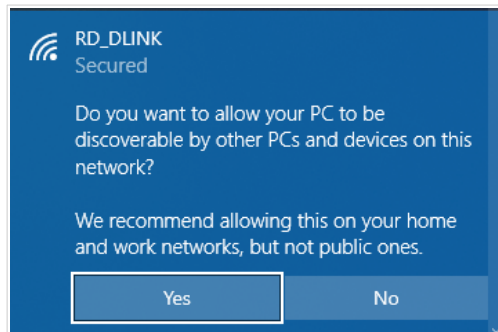

- To open the list of available wireless networks, select the icon of the wireless network connection and click the **Connect To** button or left-click the network icon in the notification area located on the right side of the taskbar.

- In the opened window, in the list of available wireless networks, select the wireless network **DIR-2150** (for operating in the 2.4GHz band) or **DIR-2150-5G** (for operating in the 5GHz band) and click the **Connect** button.

- In the opened window, enter the network key (see WPS PIN on the barcode label on the bottom panel of the device) in the **Security key** field and click the **Next** button.
- Allow or forbid your PC to be discoverable by other devices on this network (**Yes / No**).

12. Wait for about 20-30 seconds. After the connection is established, the network icon will be displayed as a dot with curved lines indicating the signal level.

If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the router you will need to reconfigure the wireless connection using the newly specified settings.

CONFIGURING ROUTER

Connecting to Web-based Interface

Start a web browser. In the address bar of the web browser, enter the domain name of the router (by default, **dlinkrouter.local**) with a dot at the end and press the **Enter** key. Also you can enter the IP address of the device (by default, **192.168.0.1**).

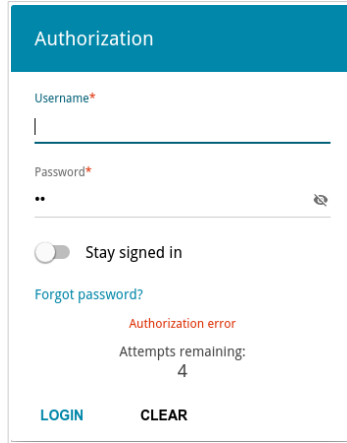

! If the error “*The page cannot be displayed*” (or “*Unable to display the page*”/“*Could not connect to remote server*”) occurs upon connecting to the web-based interface of the router, make sure that you have properly connected the router to your computer.

If the device has not been configured previously or the default settings have been restored, after access to the web-based interface the Initial Configuration Wizard opens (see the **Initial Configuration Wizard** section, page 22).

Dear Customer! It's the first time the device is turned on. Please configure the device in order to use the Internet access services.
To run the Wizard, click the "Start" button.

START

If you configured the device previously, after access to the web-based interface the login page opens. Enter the username (**admin**) in the **Username** field and the password you specified in the **Password** field, then click the **LOGIN** button.

Authorization

Username*

admin

Password*

••

Stay signed in

[Forgot password?](#)

Authorization error

Attempts remaining:
4

[LOGIN](#) [CLEAR](#)

In order not to log out, move the **Stay signed in** switch to the right. After closing the web browser or rebooting the device, you need to enter the username and the password again.

If you enter a wrong password several times, the web-based interface will be blocked for a while. Please wait for one minute and reenter the password you specified.

The **Summary** page displays general information on the router and its software.

The screenshot shows the 'Summary' page of the DIR-2150 router. The page is organized into several sections:

- Device Information:**
 - Model: DIR-2150
 - Hardware version: R1
 - Firmware version: 4.0.2
 - Build time: Fri Apr 28 2023 12:10:10 PM MSK
 - UI version: 1.39.0.7e97a69-embedded
 - Vendor: D-Link Russia
 - Serial number: TR1M107000100
 - Support: support@dlink.ru
 - Summary: Root filesystem image for DIR_2150_MT7621D
 - Uptime: 2 days 18 h. 51 min.
 - Device mode: Router (with a 'Router' label and a blue underline)
 - Enable LEDs:
- WAN IPv4:**
 - Connection type: Dynamic IPv4
 - Status: Connected ●
 - MAC address: 00:0C:43:27:31:87
 - IP address: 192.168.161.236
- LAN:**
 - LAN IPv4: 192.168.0.1
 - Wireless connections: -
 - Wired connections: 1
- LAN Ports:**
 - LAN4: Off
 - LAN3: Off
 - LAN2: Off
 - LAN1: 1000M-Full
- Wi-Fi 2.4 GHz:**
 - Status: On ●
 - Broadcasting: On ●
 - Additional networks: 0
 - Network name (SSID): DIR-2150-3187
 - Security: WPA2-PSK 🔒
- Wi-Fi 5 GHz:**
 - Status: On ●
 - Broadcasting: On ●
 - Additional networks: 0
 - Network name (SSID): DIR-2150-5G-3187
 - Security: WPA2-PSK 🔒
- USB Devices:**
 - JetFlash TS2GJFV30 usb1_1
 - JetFlash TS2GJFV30 usb1_2

The **Home** page displays links to the most frequently used pages with device's settings.

The screenshot shows the 'Home' page of the D-Link configuration interface. The page has a teal header with a menu icon on the left, the word 'Home' in the center, and an envelope icon on the right. Below the header, a welcome message reads: 'Welcome to configuration interface of D-Link device!' followed by a sub-header: 'This page contains links to interface sections which are often accessed after the initial configuration. Complete list of sections is available in the menu.'

The main content area features several service tiles, each with an icon, a title, and a brief description:

- URL Filter**: You can block access to unwanted websites by URL addresses.
- SkyDNS**: Service for web filtering and safe internet access.
- Virtual Servers**: You can create virtual servers for redirect incoming Internet traffic to a specified IP address in the local area network.
- Restriction of Wireless Clients Access**: You can block Wi-Fi access to the device for certain clients.
- Connection of Multimedia Devices**: Select ports to connect multimedia devices.
- DLNA Server**: On the DLNA page, you can enable the built-in DLNA server of the router to provide access to the USB storage for users of your LAN.
- Print Server**: Configuration of a printer connected to the USB port of the device for shared use of the LAN users.
- Torrent Client**: You can use your device to exchange files via the BitTorrent protocol, if you connect an external storage and configure the torrent client.
- Device Information**: The device's information summary.
- Wi-Fi Configuration**: Configuration of basic Wi-Fi parameters. Here you can configure the network name, security settings, etc.

At the bottom of the page, there are two buttons: 'Download on the App Store' and 'GET IT ON Google Play'.

The web-based interface of the router is multilingual. You can select the needed language upon the initial configuration of the web-based interface of the router or in the **System / Configuration** section of the menu.

Other settings of the router are available in the menu in the left part of the page. Go to the relevant section and select the needed page or run the wizard in the **Initial Configuration** section.

Initial Configuration Wizard

In order to start the Initial Configuration Wizard manually, go to the **Initial Configuration** section.

Click the **OK** button and wait until the factory default settings are restored.

If you perform initial configuration of the router via Wi-Fi connection, please make sure that you are connected to the wireless network of DIR-2150 (see the WLAN name (SSID) in the **Default Settings** section, page 3) and click the **NEXT** button. Then click the **START** button.

If the device has not been configured previously or the default settings have been restored, the Initial Configuration Wizard starts automatically upon access to the web-based interface or upon opening a web site on the Internet.

1. Click **YES** in order to leave the current language of the web-based interface or click **NO** to select another language.

2. On the next page, click the **CONTINUE** button.

Selecting Operation Mode

Select the needed operation mode and click the **NEXT** button.

Router

In order to connect your device to a wired ISP, on the **Device mode** page, from the **Connection method** list, select the **Wired connection** value. Then from the **Work mode** list select the **Router** value. In this mode you can configure a WAN connection, set your own settings for the wireless network in the 2.4GHz and 5GHz bands, configure LAN ports to connect an STB or VoIP phone, and set your own password for access to the web-based interface of the device.

Internet — WAN — Router — LAN — Desktop PC

Router — SSID — Laptop

< BACK NEXT >

In order to connect your device to the network of a 3G or LTE operator, on the **Device mode** page, from the **Connection method** list, select the **Mobile Internet** value. In this mode you can configure a 3G/LTE WAN connection, set your own settings for the wireless network in the 2.4GHz and 5GHz bands, and set your own password for access to the web-based interface of the device.

In order to connect your device to a wireless ISP (WISP), on the **Device mode** page, from the **Connection method** list, select the **Wi-Fi** value. Then from the **Work mode** list select the **WISP Repeater** value. In this mode you can connect your device to another access point, configure a WAN connection, set your own settings for the wireless network in the 2.4GHz and 5GHz bands, and set your own password for access to the web-based interface of the device.

Access Point or Repeater

In order to connect your device to a wired router for adding a wireless network to the existing local network, on the **Device mode** page, from the **Connection method** list, select the **Wired connection** value. Then from the **Work mode** list select the **Access point** value. In this mode you can change the LAN IP address, set your own settings for the wireless network in the 2.4GHz and 5GHz bands, and set your own password for access to the web-based interface of the device.

In order to connect your device to a wireless router for extending the range of the existing wireless network, on the **Device mode** page, from the **Connection method** list, select the **Wi-Fi** value. Then from the **Work mode** list select the **Repeater** value. In this mode you can change the LAN IP address, connect your device to another access point, set your own settings for the wireless network in the 2.4GHz and 5GHz bands, and set your own password for access to the web-based interface of the device.

In order to let wired PCs connected to your device access the network of a wireless router, on the **Device mode** page, from the **Connection method** list, select the **Wi-Fi** value. Then from the **Work mode** list select the **Client** value. In this mode you can change the LAN IP address, connect your device to another access point, and set your own password for access to the web-based interface of the device.

Creating 3G/LTE WAN Connection

This configuration step is available for the **Mobile Internet** mode.

1. If the PIN code check is enabled for the SIM card inserted into your USB modem, enter the PIN code in the **PIN** field and click the **APPLY** button.

The screenshot shows the 'Modem Settings' page. At the top, it displays 'Vendor:' and 'Model: E3131'. Below this is a 'Modem' dropdown menu currently set to 'E3131'. A message reads: 'Please enter the PIN code of the SIM card. Modem: E3131. Attempts left: 3'. There is a text input field labeled 'PIN*' with a small eye icon to its right. At the bottom, there are three buttons: 'APPLY', '< BACK', and 'NEXT >'.

2. Please wait while the router automatically creates a WAN connection for your mobile operator.

The screenshot shows the 'Modem Settings' page after the connection has been created. It displays the same 'Vendor:' and 'Model: E3131' information. The 'Modem' dropdown is still set to 'E3131'. A message reads: 'The connection has been created automatically. Click "Next" to continue configuration'. At the bottom, the 'APPLY' button is no longer visible, and the 'NEXT >' button is now highlighted in blue.

3. Click the **NEXT** button.

If the router failed to create a WAN connection automatically, click the **CONFIGURE MANUALLY** button. On the **Modem Settings** page, configure all needed settings and click the **NEXT** button.

Changing LAN IPv4 Address

This configuration step is available for the **Access point**, **Repeater**, and **Client** modes.

1. Select the **Automatic obtainment of IPv4 address** to let DIR-2150 automatically obtain the LAN IPv4 address.
2. In the **Hostname** field, you should specify a domain name of the router using which you can access the web-based interface after finishing the Wizard. Enter a new domain name of the router ending with **.local** or leave the value suggested by the router.

In order to access the web-based interface using the domain name, in the address bar of the web browser, enter the name of the router with a dot at the end.

If you want to manually assign the LAN IPv4 address for DIR-2150, do not select the **Automatic obtainment of IPv4 address** checkbox and fill in the **IP address**, **Subnet mask**, **DNS IP address**, **Hostname** fields and, if needed, the **Gateway IP address** field. Make sure that the assigned address does not coincide with the LAN IPv4 address of the router to which your device connects.

LAN

Automatic obtainment of IPv4 address

 *Automatic obtainment of IPv4 address sufficiently protects against use of the same addresses in one LAN. In order to avoid IPv4 address conflicts, static IPv4 addresses of LAN devices should not coincide with addresses from the address range assigned by an upper-level router (or a local DHCP server).*

IP address*
192.168.0.1

Subnet mask*
255.255.255.0

Gateway IP address

8.8.8.8

Hostname*
dlinkap60ee.local

 *Specify a domain name ending with .local. In order to access the web-based interface using the domain name, enter this name with a dot and slash at the end in the address bar of the web browser (for example, dlinkap12ab.local./)*

3. Click the **NEXT** button.

Wi-Fi Client

This configuration step is available for the **WISP Repeater**, **Repeater**, and **Client** modes.

1. On the **Wi-Fi Client** page, click the **WIRELESS NETWORKS** button and select the network to which you want to connect in the opened window. When you select a network, the **Network name (SSID)** and **BSSID** fields are filled in automatically.

If you cannot find the needed network in the list, click the **UPDATE LIST** icon ().

2. If a password is needed to connect to the selected network, fill in the relevant field. Click the **Show** icon () to display the entered password.

If you connect to a hidden network, select the band where the hidden network operates from the **Frequency band** list and enter the network name in the **Network name (SSID)** field. Then select a needed value from the **Network authentication** list and then, if needed, enter the password in the relevant field.

3. Click the **NEXT** button.

Configuring Wired WAN Connection

This configuration step is available for the **Router** and **WISP Repeater** modes.

! You should configure your WAN connection in accordance with data provided by your Internet service provider (ISP). Make sure that you have obtained all necessary information prior to configuring your connection. Otherwise contact your ISP.

1. On the **Internet connection type** page, click the **SCAN** button (available for the **Router** mode only) to automatically specify the connection type used by your ISP or manually select the needed value from the **Connection type** list.

Static IPv4: Fill in the following fields: **IP address**, **Subnet mask**, **Gateway IP address**, and **DNS IP address**.

2. If a particular MAC address was registered by your ISP upon concluding the agreement, from the **MAC address assignment method** drop-down list (available for the **Router** mode only), select the **Manual** value and enter this address in the **MAC address** field. Choose the **Clone MAC address of your device** value to place the MAC address of your network interface card in the field, or leave the **Default MAC address** value to place the router's WAN interface MAC address in the field.
3. If the Internet access is provided via a VLAN channel, select the **Use VLAN** checkbox and fill in the **VLAN ID** field (available for the **Router** mode only).

The screenshot shows a configuration window for MAC address assignment. At the top, there is a dropdown menu labeled "MAC address assignment method" with "Default MAC address" selected. Below this is a text input field for "Default MAC address". The "MAC address" field contains "10:62:eb:2c:c8:3a" and has a lock icon to its right. Below the MAC address field, there is an information icon and the text: "In some ISP's networks, it is required to register a certain MAC address in order to get access to the Internet." There is a checked checkbox labeled "Use VLAN". Below the checkbox, there is another information icon and the text: "Select the checkbox if the Internet access is provided via a VLAN channel." At the bottom, there is a text input field for "VLAN ID*".

4. Click the **NEXT** button.

Configuring Wireless Network

This configuration step is available for the **Mobile Internet**, **Router**, **Access point**, **WISP Repeater**, and **Repeater** modes.

1. On the **Wireless Network 2.4 GHz** page, in the **Network name** field, specify your own name for the wireless network in the 2.4GHz band or leave the value suggested by the router.
2. In the **Password** field, specify your own password for access to the wireless network or leave the value suggested by the router (WPS PIN of the device, see the barcode label).
3. If the router is used as a Wi-Fi client, you can specify the same parameters of the wireless network as specified for the network to which you are connecting. To do this, click the **USE** button (available for the **WISP Repeater** and **Repeater** modes only).
4. You can restore the parameters of the wireless network specified before resetting to factory defaults. To do this, click the **RESTORE** button.

Wireless Network 2.4 GHz

Enable

Broadcast wireless network 2.4 GHz

① Disabling broadcast does not influence the ability to connect to another Wi-Fi network as a client.

Network name*

my wi-fi

Open network

Password*

..... 

① Password should be between 8 and 63 ASCII characters

USE Use the same parameters as on the root access point.

RESTORE You can restore network name and security that was set before applying factory settings.

5. If you want to create an additional wireless network isolated from your LAN in the 2.4GHz band, select the **Enable guest network** checkbox (available for the **Mobile Internet**, **Router**, and **WISP Repeater** modes only).

Enable guest network

① Guest Wi-Fi network allows connection to your device and getting access to the Internet. Upon that computers connected to this wireless network will be isolated from the resources of your main local area network. This helps to secure your LAN while you provide access to the Internet for temporary users.

Network name*

my wi-fi_Guest

Open network

Max associated clients*

0

6. In the **Network name** field, specify your own name for the guest wireless network or leave the value suggested by the router.
7. If you want to create a password for access to the guest wireless network, deselect the **Open network** checkbox and fill in the **Password** field.
8. Click the **NEXT** button.
9. On the **Wireless Network 5 GHz** page, specify needed settings for the wireless network in the 5GHz band and click the **NEXT** button.

Configuring LAN Ports for IPTV/VoIP

This configuration step is available for the **Router** mode.

1. On the **IPTV** page, select the **Is an STB connected to the device** checkbox.

IPTV

Is an STB connected to the device?

ⓘ If your ISP provides IPTV service, you can connect an STB directly to the router without additional equipment

Use VLAN ID

LAN4 LAN3 LAN2 LAN1 WAN

2. Select a free LAN port for connecting your set-top box.
3. If the IPTV service is provided via a VLAN channel, select the **Use VLAN ID** checkbox and fill in the **VLAN ID** field.
4. Click the **NEXT** button.

5. On the **VoIP** page, select the **Is an IP phone connected to the device** checkbox.

VoIP

Is an IP phone connected to the device?

ⓘ If your ISP provides VoIP service, you can connect an IP phone directly to the router without additional equipment

Use VLAN ID

LAN4 LAN3 LAN2 LAN1 WAN

6. Select a free LAN port for connecting your IP phone.
7. If the VoIP service is provided via a VLAN channel, select the **Use VLAN ID** checkbox and fill in the **VLAN ID** field.
8. Click the **NEXT** button.

Changing Web-based Interface Password

On this page you should change the default administrator password. To do this, enter a new password in the **User's interface password** and **Password confirmation** fields. You may set any password except **admin**. Use digits, Latin letters (uppercase and/or lowercase), and other characters available in the US keyboard layout.⁴

Changing web-based interface password

For security reasons, please change the password used to access the device's settings.

User's interface password*

ⓘ Password should be between 1 and 31 ASCII characters

Password confirmation*

Remember or write down the new password for the administrator account. In case of losing the new password, you can access the settings of the router only after restoring the factory default settings via the hardware **RESET** button. This procedure wipes out all settings that you have configured for your router.

Click the **NEXT** button.

On the next page, check all the settings you have just specified.

Also you can save a text file with parameters set by the Wizard to your PC. To do this, click the **SAVE CONFIGURATION FILE** button and follow the dialog box appeared.

To finish the Wizard, click the **APPLY** button. The router will apply settings, reboot, if needed, and check the Internet connection if the Wizard has configured a WAN connection.

⁴ 0-9, A-Z, a-z, space, !"#\$%&'()*+,-./:;<=>?@[\\]^_`{|}~.

Configuring Local Area Network

1. Go to the **Connections Setup / LAN** page.
2. If needed, change the IPv4 address of the router's LAN interface and the mask of the local subnet. To do this, click the **IPv4** tab and specify needed values in the **IP address** and **Mask** fields in the **Local IP Address** section.

Local IP Address

IP address*

192.168.0.1

Mask*

255.255.255.0

Hostname

dlinkrouter.local

 Specify a domain name ending with .local. In order to access the web-based interface using the domain name, enter this name with a dot and slash at the end in the address bar of the web browser (for example, dlinkrouter.local.)

3. If needed, add a static IPv6 address of the router's LAN interface. To do this, click the **IPv6** tab. In the **Local IPv6 Address** section, click the **ADD** button. In the line displayed, enter an IPv6 address and then a slash followed by a decimal value of the prefix length.

Local IPv6 Address

For example: fd00::1/64 

 Enter IPv6 address, slash (/), and a decimal value equal to the size in bits of the prefix.

ADD

Hostname

dlinkrouter.local

 Specify a domain name ending with .local. In order to access the web-based interface using the domain name, enter this name with a dot and slash at the end in the address bar of the web browser (for example, dlinkrouter.local.)

4. **IPv4 address assignment.** By default, the built-in DHCP server of the router assigns IPv4 addresses to the devices of the LAN. If you want to manually assign IPv4 addresses, disable the DHCP server (click the **IPv4** tab and select the **Disable** value from the **Mode of IPv4 address assignment** drop-down list in the **Dynamic IP Addresses** section).

Dynamic IP Addresses

Mode of IPv4 address assignment
DHCP ▼

Start IP*
192.168.0.100

End IP*
192.168.0.199

SELECT ADDRESS RANGE

Lease time (in minutes)*
1440

DNS relay

① Assigns the LAN IP address of the device as the DNS server for connected clients.

5. **IPv6 address assignment.** By default, the devices of the LAN automatically assign IPv6 addresses to themselves (the **Stateless** value is selected from the **Mode of IPv6 address assignment** drop-down list in the **Dynamic IP Addresses** section on the **IPv6** tab). If the devices of the LAN do not support IPv6 address autoconfiguration, use the built-in DHCPv6 server of the router (select the **Stateful** value from the **Mode of IPv6 address assignment** drop-down list) or an external DHCP server (select the **Relay** value from the **Mode of IPv6 address assignment** drop-down list). If you want to manually assign IPv6 addresses to devices of the LAN, select the **Disable** value from the **Mode of IPv6 address assignment** drop-down list.

Dynamic IP Addresses

Mode of IPv6 address assignment
Stateful

Start IP*
::2

End IP*
::64

SELECT ADDRESS RANGE

Lease time (in minutes)*
1440

Lease time will be chosen by ISP based on the delegated prefix life time.

The default route for LAN clients

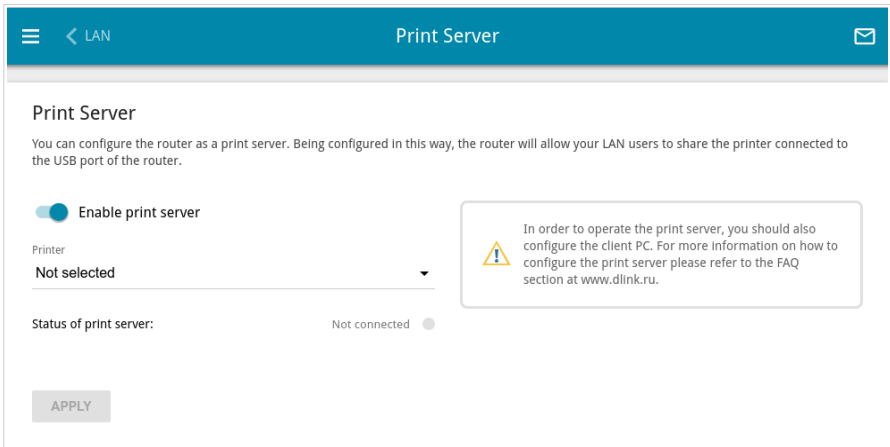

DNS relay

Assigns the LAN IP address of the device as the DNS server for connected clients.

6. After specifying the needed parameters on the **Connections Setup / LAN** page, click the **APPLY** button.

Configuring Network Printer

1. Make sure that a driver for your printer which will be used as a network printer is installed on your PC.⁵
2. To connect the printer to the router, power off both devices. Connect the printer to the USB port of the router, power on the printer, then power on the router.
3. Then access the web-based interface and go to the **Print Server** page.
4. Move the **Enable print server** switch to the right, from the **Printer** drop-down list, select the printer connected to the USB port of the router, and click the **APPLY** button.

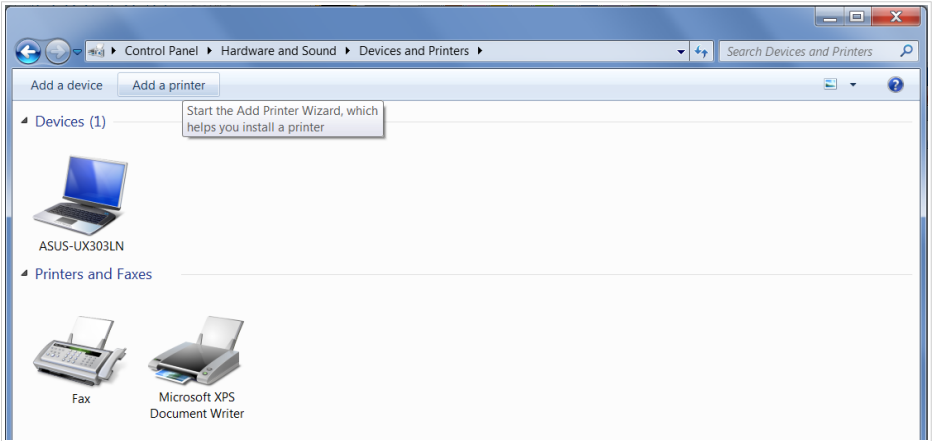

5. Click the **Start** button and go to the **Control Panel** window.
6. Select the **Hardware and Sound** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View devices and printers** line.)

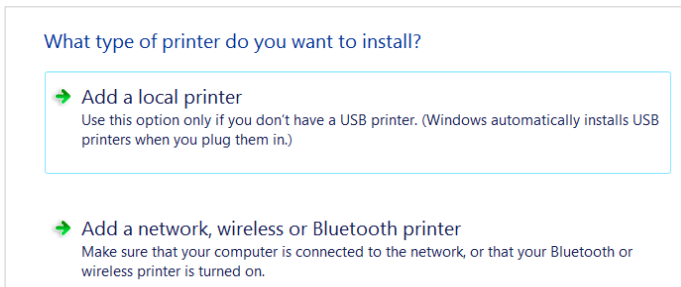

- 5 Some home printers can work incorrectly as network printers. Contact the technical support of your printer's manufacturer to clarify if your printer supports this function.

7. In the opened window, click the **Add a printer** button.

8. Select the **Add a local printer** value and click the **Next** button.

9. Select the **Create a new port** choice of the radio button and then select the **Standard TCP/IP Port** value from the **Type of port** drop-down list. Click the **Next** button.

10. Enter the IP address of the router in the **Hostname or IP address** field (by default, **192.168.0.1**). Deselect the **Query the printer and automatically select the driver to use** checkbox and, if needed, change the name of the port in the **Port name** field. Click the **Next** button.

Type a printer hostname or IP address

Device type:

Hostname or IP address:

Port name:

Query the printer and automatically select the driver to use

11. Wait for about 20-30 seconds. In the opened **Additional port information required** window, select the **Custom** choice of the radio button, click the **Settings** button, and make sure that the **RAW** choice of the radio button is selected in the **Protocol** section and the **9100** value is specified in the **Raw Settings** section. Click the **OK** button.

Additional port information required

The device is not found on the network. Be sure that:

1. The device is turned on.
2. The network is connected.
3. The device is properly configured.
4. The address on the previous page is correct.

If you think the address is not correct, click Back to return to the previous page. Then correct the address and perform another search on the network. If you are sure the address is correct, select the device type below.

Device Type

Standard

Custom

Configure Standard TCP/IP Port Monitor

Port Settings

Port Name:

Printer Name or IP Address:

Protocol

Raw LPR

Raw Settings

Port Number:

12. Then in the **Additional port information required** window, select the **Standard** choice of the radio button and click the **Next** button.

13. Select your printer and click the **Next** button.

Install the printer driver

 Choose your printer from the list. Click Windows Update to see more models.
To install the driver from an installation CD, click Have Disk.

Manufacturer	Printers
Brother	 Brother DCP-116C
Canon	 Brother DCP-117C
Epson	 Brother DCP-128C
Fuji Xerox	 Brother DCP-129C
Generic	 Brother DCP-130C

 This driver is digitally signed. [Tell me why driver signing is important](#)

14. Select the **Use the driver that is currently installed** choice of the radio button and click the **Next** button.

Which version of the driver do you want to use?

Windows detected that a driver is already installed for this printer.

Use the driver that is currently installed (recommended)

15. Enter a name of the printer (you can specify any name) in the **Printer name** field and click the **Next** button.

Type a printer name

Printer name:

16. In the **Printer Sharing** window, select the **Do not share this printer** choice of the radio button and click the **Next** button.

17. If you need to print a test page, click the **Print a test page** button. To finish the printer installation, click the **Finish** button.

TERMS AND CONDITIONS FOR INSTALLATION, SAFE OPERATION, STORAGE, TRANSPORTATION, AND DISPOSAL

Please carefully read this section before installation and connection of the device. Make sure that the power adapter and cables are not damaged. The device should be used only as intended (reception/transmission of data in computer networks); installation should be performed in accordance with the documents available on the official website.

The device is intended for use in dry, clean, dust-free, and well ventilated areas with normal humidity away from strong heat sources. Do not use the device outdoors or in the areas with high humidity. Do not place foreign objects on the device. Do not obstruct the ventilation openings of the device. The environmental temperature near the device and the temperature inside the device's cover should be within the range from 0 °C to +40 °C.

Only use the power adapter supplied with the device. Do not plug in the adapter, if its case or cable are damaged. Plug the adapter only into working electrical outlets with parameters indicated on the adapter. The electrical outlet must be installed near the equipment and must be easily accessible.

Do not open the cover of the device! Unplug the device before dusting and cleaning. Use a damp cloth to clean the device. Do not use liquid/aerosol cleaners or magnetic/static cleaning devices. Prevent moisture getting into the device or the power adapter.

The device may be stored and transported only in the original packaging at the temperature and humidity indicated in the specifications. No restrictions apply to sales. Please contact an authorized distributor to dispose of the equipment upon the end of its operation.

The service life of the device is 2 years.

The warranty period starts on the date of purchase from an authorized distributor within Russia or the CIS countries and extends for one year.

Irrespective of the date of purchase, the warranty period cannot exceed 2 years from the date of manufacture, which is determined by 6th (year) and 7th (month) digit in the serial number printed on the device label.

Year: E – 2014, F – 2015, G – 2016, H – 2017, I – 2018, J – 2019, 0 – 2020, 1 – 2021, 2 – 2022, 3 – 2023.

Month: 1 – January, 2 – February, ..., 9 – September, A – October, B – November, C – December.

If a fault is detected, please contact D-Link service center or technical support group.

TECHNICAL SUPPORT

You can find software updates and user documentation on our website.

D-Link provides its customers with free support within the product's warranty period.

Customers can contact the technical support group by phone or by e-mail/Internet.
